## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-25 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art searched and cited failed to teach or fairly suggest applicants limitation of having an electrode for a deceleration lens assembly for an ion implanter, comprising an electrode body which defines an aperture having a periphery, a center, an axis passing through said center and defining a length of said aperture along said axis, said axis comprising a first axis segment extending from the center of said aperture toward the periphery of said aperture along said axis and having a length in the range of 20-40% of said aperture length, wherein the average width of the aperture measured at points along said axis segment is less than the width of said aperture measured at the center of said aperture in combination with the remaining elements of claims 1, 10, 19, and 25. The prior art teaches deceleration lens closely related to applicant's disclosure, as seen and shown in the attached prior art references, but all failed to clearly define alone or in combination applicant's specific aperture sizes and measurements. Claims 2-9, 11-18, and 20-24 are allowable because of their dependencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### *Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patents 4,804,852 (Rose et al), 5,420,415 (Trueira), 6,534,775 (Harrington et al), 5,132,544 (Glavish), 5,932,882 (England et al), 6,777,882 (Goldberg et al), 5,969,366 (England et al), 4,595,837 (Wu et al), and US patent publication 2003/0066976 (Chen et al). As discussed above the cited prior art contain art similar to that being claimed by applicant, more specifically, ion implantation methods and devices having mass deceleration optics.
